

ENGAGING SMALL LANDHOLDERS IN PERI-URBAN AREAS

The Peri-urban Environmental Biosecurity Network provides a platform to connect small landholders in peri-urban communities of Greater Sydney, Wollongong, Hunter and North Coast and experts in the areas of environmental biosecurity.

The network is engaging people from all walks of life who live, play or work in peri-urban areas to contribute to detecting and reporting new and emerging environmental pests, weeds and diseases. The objective being to have more eyes and ears on the ground to report any sightings.

The network does this by publishing seasonally relevant articles on the website on how to look for and identify pests that might show up on your farm or local native patch, as well as guidance on the tools and steps to report them. Read more....
